LAINS CO<sub>2</sub> REDUCTION PARTNERSHIP PHASE . Quarterly Technical Progress Report April 1 – June 30, 2012

#### **EXECUTIVE SUMMARY**

The Plains  $CO_2$  Reduction (PCOR) Partnership is one of seven Regional Carbon Sequestration Partnerships (RCSPs) competitively awarded by the U.S. Department of Energy (DOE) National Energy Technology Laboratory in 2003 as part of a national plan to mitigate greenhouse gas emissions. The PCOR Partnership is led by the Energy & Environmental Research Center (EERC) at the University of North Dakota and continues to include stakeholders from the public and private sector in Phase III. The PCOR Partnership region includes all or part of nine U.S. states and four Canadian provinces.

Phase III, the development phase, a 10-year effort (2007–2017), is an extension of the characterization (Phase I) and validation (Phase II) phases. The Phase III efforts of the PCOR Partnership include two large-volume demonstration tests—one in Canada and one in the United States—that focus on injecting carbon dioxide (CO<sub>2</sub>) into deep geologic formations for CO<sub>2</sub> storage. Budget Period 4 (Years 3–8 of Phase III) began October 1, 2009.

This progress report presents an update of Phase III PCOR Partnership activities from April 1, 2012, through June 30, 2012.

DOE issued Modifications 22 and 23 to the PCOR Partnership Cooperative Agreement on April 30 and June 18, 2012, respectively. These modifications added incremental funding for the program, revised National Environmental Policy Act requirements, approved a cost increase for the Bell Creek monitoring well, recognized an increased cost-share requirement, and approved several changes to the program's statement of project objectives, including authorizing activities for the Interstate Oil and Gas Compact Commission's carbon storage task force and collaboration with the Petroleum Technology Research Centre's Aquistore Project.

Several meetings were held regarding the Fort Nelson and Bell Creek projects with Spectra Energy Transmission and Denbury Onshore LLC, respectively. In addition, the permanent downhole monitoring system was installed on the 0506OW monitoring well and two rounds of baseline soil gas and water sampling were completed, all in the Bell Creek Field.

Planning efforts continued for the 10th Annual Meeting and Core Basics Analysis Workshop scheduled for September 11–13, 2012, in Milwaukee, Wisconsin. Over 200 teachers received PCOR Partnership outreach materials during this reporting period, and the 4th Annual Meeting of the RCSP Water Working Group was held May 3, 2012, in Pittsburgh, Pennsylvania. Nine abstracts were accepted by the 11th International Conference on Greenhouse Gas Technologies, and a poster presentation at the 2012 American Association of Petroleum Geologists Annual Meeting received a "Top 10" Award of Excellence.

Quarterly Technical Progress Report April 1 – June 30, 2012

#### **INTRODUCTION**

The Plains CO<sub>2</sub> Reduction (PCOR) Partnership is one of seven regional partnerships operating under the U.S. Department of Energy (DOE) National Energy Technology Laboratory (NETL) Regional Carbon Sequestration Partnership (RCSP) Program. The PCOR Partnership is led by the Energy & Environmental Research Center (EERC) at the University of North Dakota (UND) in Grand Forks, North Dakota, and includes stakeholders from the public and private sector. The membership as of June 30, 2012, is listed in Table 1. The PCOR Partnership region includes all or part of nine states (Iowa, Minnesota, Missouri, Montana, Nebraska, North Dakota, South Dakota, Wisconsin, and Wyoming) and four Canadian provinces (Alberta, British Columbia, Manitoba, and Saskatchewan).

The RCSP Program is part of NETL's Carbon Sequestration Program and is a government–industry effort tasked with determining the most suitable technologies, regulations, and infrastructure needs for carbon capture and storage (CCS) on the North American continent.

The RCSP Program initiative is being implemented in three phases:

- Phase I Characterization Phase (2003–2005): characterized opportunities for carbon sequestration
- Phase II Validation Phase (2005–2009): conducted small-scale field validation tests
- Phase III Development Phase (2007–2017): involves large-volume carbon storage demonstration tests (Figure 1)

Phase III is divided into three budget periods (BPs), running from October 1, 2007, to September 30, 2017:

BP3: October 1, 2007 – September 30, 2009 BP4: October 1, 2009 – September 30, 2015 BP5: October 1, 2015 – September 30, 2017 Note: BP1 and BP2 were effective in Phase II.

The overall mission of the Phase III program is to 1) gather characterization data to verify the ability of the target formations to store carbon dioxide (CO<sub>2</sub>), 2) facilitate the development of the infrastructure required to transport CO<sub>2</sub> from sources to the injection sites, 3) facilitate development of the rapidly evolving North American regulatory and permitting framework, 4) develop opportunities for PCOR Partnership partners to capture and store CO<sub>2</sub>, 5) establish a technical framework by which carbon credits can be monetized for CO<sub>2</sub> stored in geologic formations, 6) continue collaboration with other RCSPs, and 7) provide outreach and education for CO<sub>2</sub> capture and storage stakeholders and the general public.

Figure 1. RCSP development phase: scaling up toward commercialization (Source: www.netl.doe.gov/technologies/carbon\_seq/infrastructure/rcspiii.html [accessed July 2012]).

In Phase III, the PCOR Partnership is building on the information generated in its characterization (Phase I) and validation (Phase II) phases. The PCOR Partnership plans to fully utilize the infrastructure of its region to maximize  $CO_2$  injection volumes. A programmatic RCSP Phase III goal is the injection of approximately 1 million tons of  $CO_2$  a year into at least one regionally significant geologic formation. Each of the RCSP's large-volume injection tests is designed to demonstrate that  $CO_2$  storage sites have the potential to store regional  $CO_2$  emissions safely, permanently, and economically for hundreds of years.

The PCOR Partnership is working toward the establishment of two demonstration sites. The sites are located 1) in the Bell Creek oil field in Powder River County in southeastern Montana and 2) near Spectra Energy Transmission's (SET's) Fort Nelson gas-processing facility, situated near Fort Nelson, British Columbia, Canada (Figure 2).

The PCOR Partnership's objectives for the demonstration projects are as follows: 1) conduct a successful field demonstration to verify that the region's large number of oil fields have the potential to store significant quantities of  $CO_2$  in a safe, economical, and environmentally responsible manner and 2) conduct a successful demonstration to verify the economic feasibility of using the region's carbonate saline formations for safe, long-term  $CO_2$  storage. During Phase III, the PCOR Partnership will continue to refine storage resource estimates and evaluate other factors relevant to regional storage goals.

Figure 2. PCOR Partnership Phase III demonstration sites.

The PCOR Partnership plans to achieve its Phase III mission through a series of 16 tasks: 1) Regional Characterization; 2) Public Outreach and Education; 3) Permitting and National Environmental Policy Act (NEPA) Compliance; 4) Site Characterization and Modeling; 5) Well Drilling and Completion; 6) Infrastructure Development; 7) CO<sub>2</sub> Procurement; 8) Transportation and Injection Operations; 9) Operational Monitoring and Modeling; 10) Site Closure; 11) Postinjection Monitoring and Modeling; 12) Project Assessment; 13) Project Management; 14) RCSP Water Working Group (WWG) Coordination; 15) Further Characterization of the Zama Acid Gas Enhanced Oil Recovery (EOR), CO<sub>2</sub> Storage, and Monitoring Project; and 16) Characterization of the Basal Cambrian System. Table 2 lists the responsibility matrix for these 16 tasks.
